Enterprise

Introduction into the IHE World

Jürgen Brandstätter, MSc

Co-chair, IHE Europe

Co-chair, Pharmacy Planning committee

Co-chair, Global Deployment Coordination Committee (GDC)

Member, IHE International Board

CodeWerk Software GmbH, Austria

What is IHE?

Standards

Interoperability use cases
typically require
„combinations“ of standards
- but how to compose?

eHealth Projects

What is IHE?

Standards

Profiling and Testing

eHealth Projects

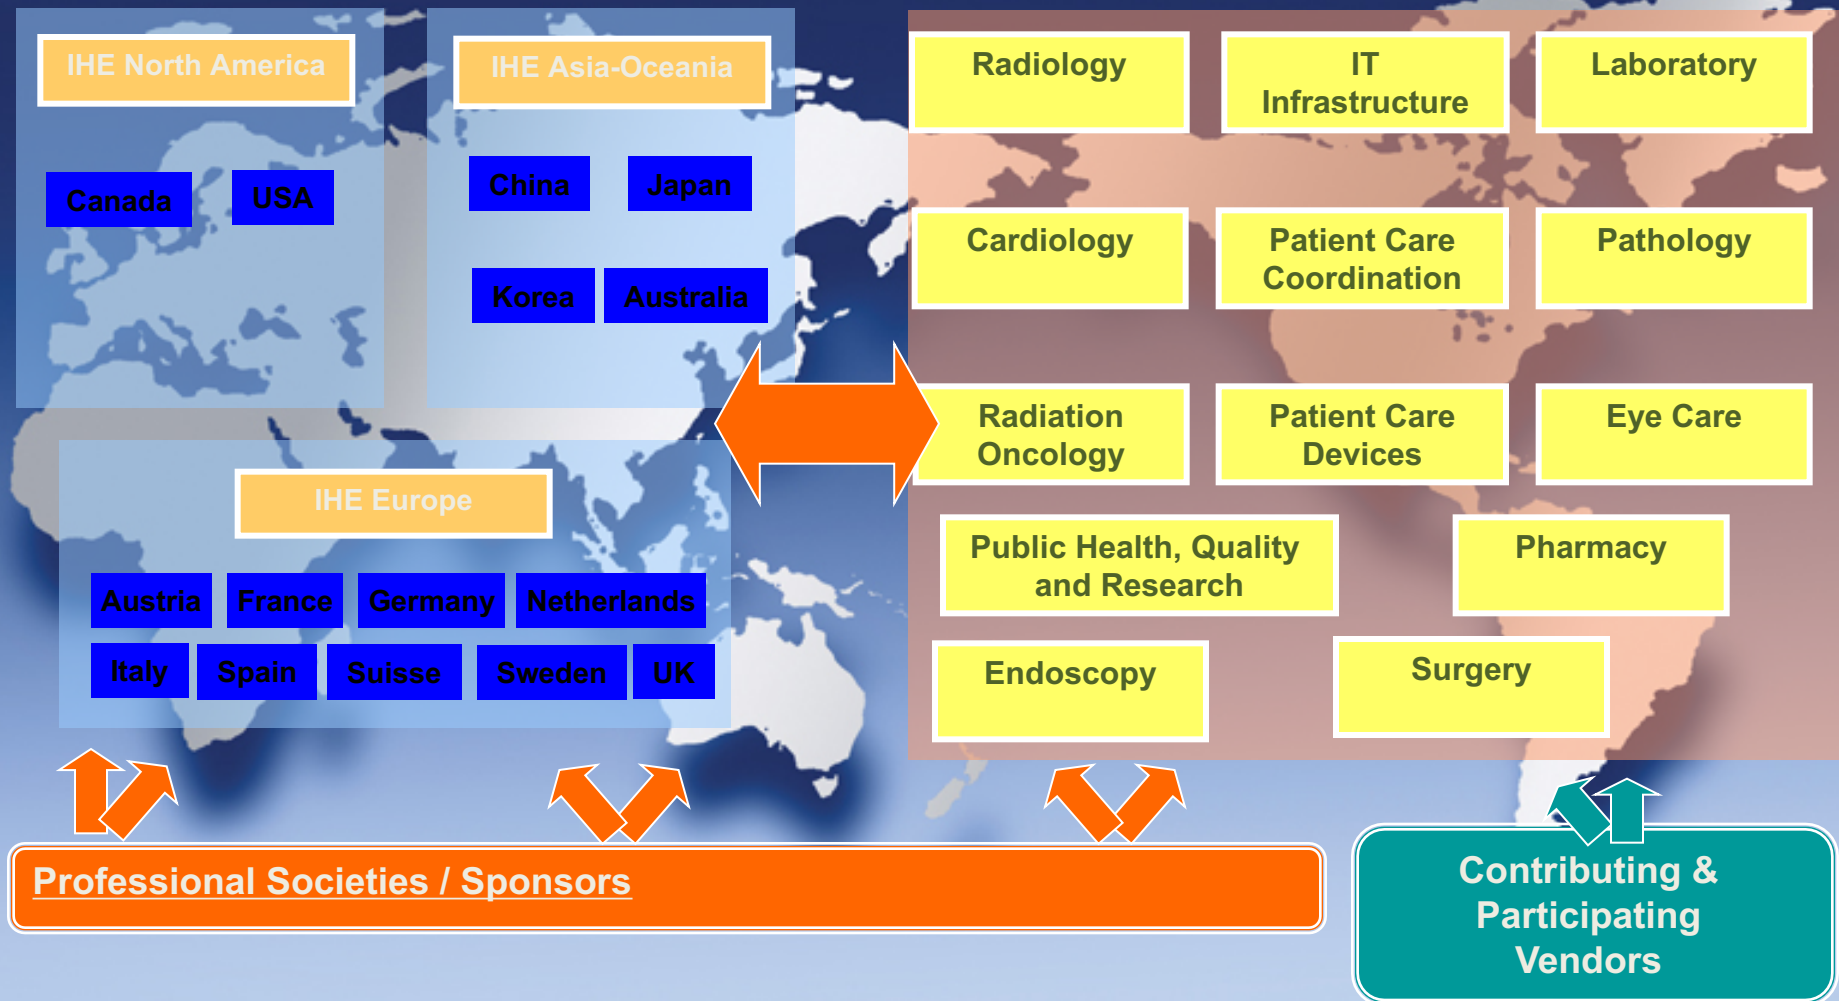

IHE is a **non-profit** SDO which uses „**existing**“ standards to profile Interoperability use-cases

IHE International Board

Example Deployment Committees

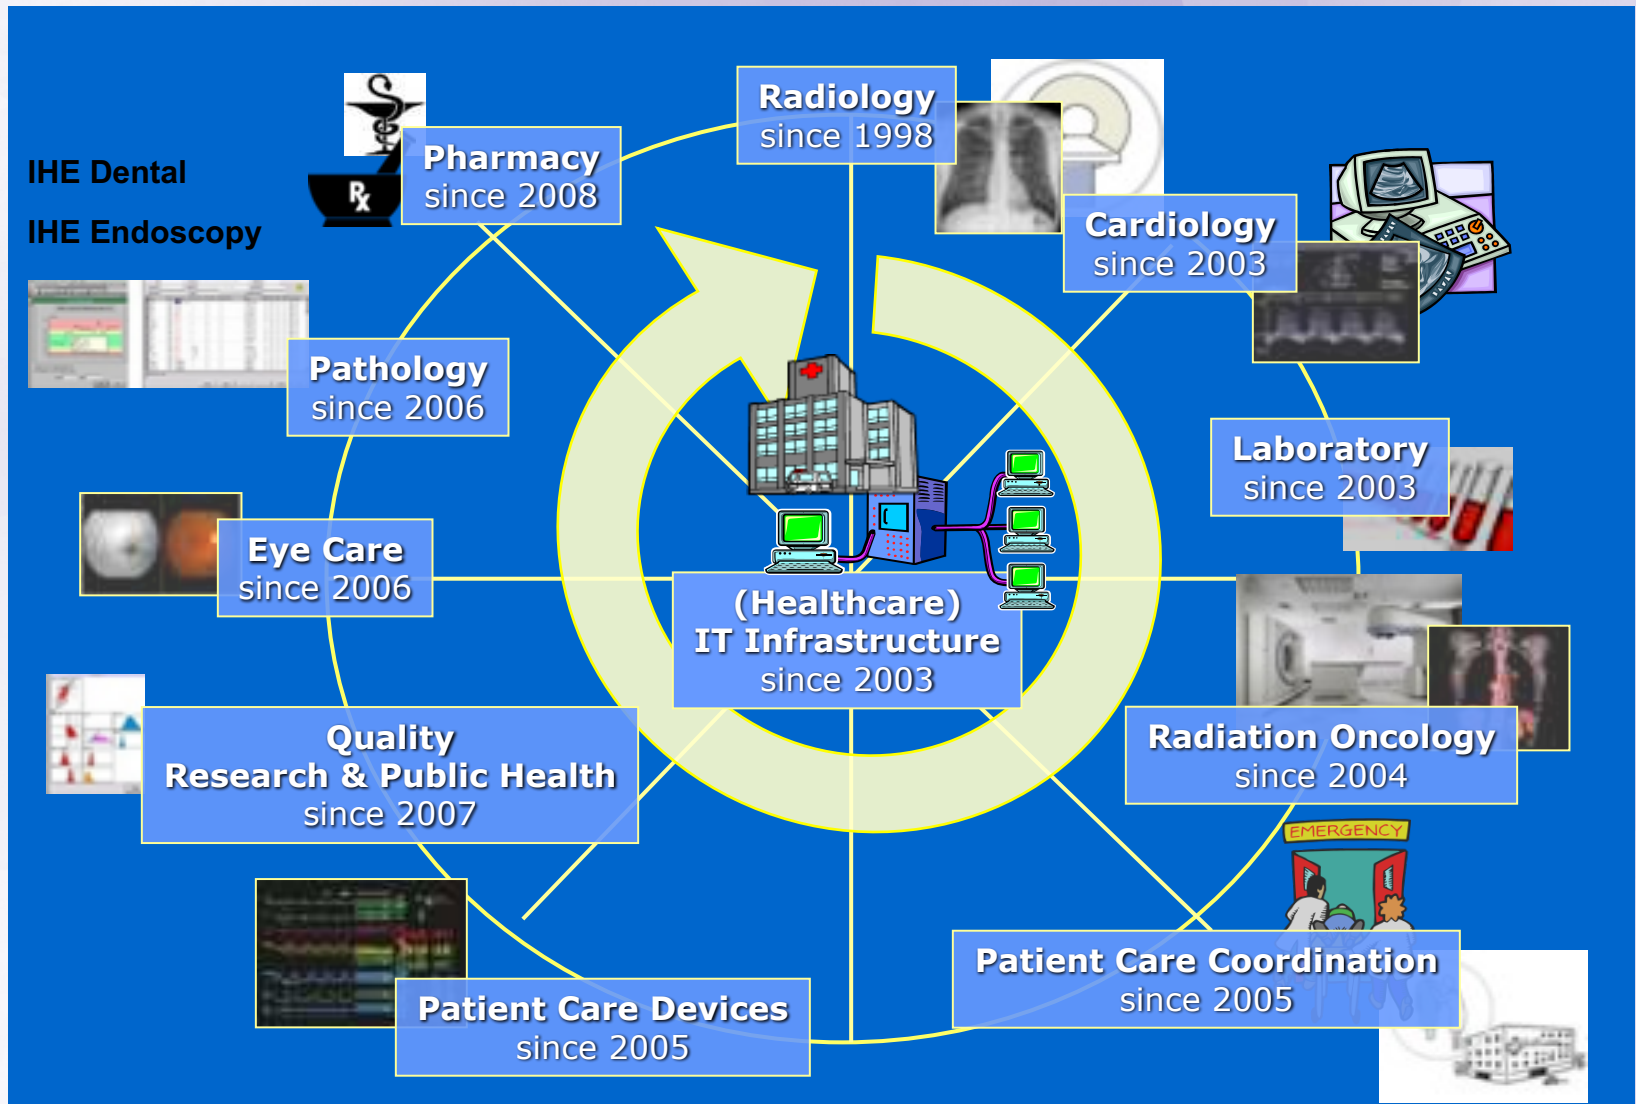

Development Domains

- Regional Deployment Committee founded in 2000
 - <http://www.ihe-europe.net>
- Overarches European National Deployment Committees
 - Austria, Belgium, Finland, France, Germany, Italy, Luxembourg, Spain, Switzerland, The Netherlands, Turkey, United Kingdom
- Several committees
 - IHE Services
 - EU Affairs
 - MarCom
- Organizes the European CAT
 - Since 2001 in Paris
 - 2018: Den Haag, The Netherlands

The IHE Domains

Testing as part of the cycle

- Everyone accepts: **Testing is crucial for success of a project**
- But reputation of testing is low
 - It is a lot of effort and expensive
 - Nothing is „created“, no innovation -> simply boring!
- Everyone relies on that „it is done by someone, somehow“
- Problem: Testing becomes a bottleneck in the future
 - Large-scale eHealth projects are starting up everywhere, vendors start getting overloaded by many tailored testing needs
- Solution: Synergies in testing must be found!

That's why IHE invented the **Connectathon!**

CAT – Triple purpose

1. **Test implementation of the IHE profiles** within product/open source
 - Verify that the vendors did a good job
2. **Verify that what the committees specified** is clear!
 - Verify that the Technical Frameworks are not ambiguous
 - Verify that that the Technical Committee did not miss anything
3. **Build a community** of computer geeks who loves local brewed beers and have fun working together to connect healthcare

- **IHE International Conformity Assessment** program was launched in 2015 and is the next step in testing rigor
 - More rigorous testing process
 - Assessment at product level
 - Stronger assurance of interoperability to marketplace
- Based on an internationally recognized quality system
 - Testing for specific IHE Profiles is performed by Testing Laboratories **ISO17025 accredited**
- Conformity assessment scheme
 - **Ensure world-wide equivalence**

Phases of Interoperability Testing

IHE driven

Project driven (national, regional, hospital)

**1) Profile level
Testing of
vendor/open source
systems**

**2) Use case level
testing of vendor/open
source systems**

(covers transport, content,
security, privacy, workflow)

**3) Operational On-Boarding
level testing of partners
engaging in Info Exchange**

(covers technical, semantic and
policies)

Layers of Interoperability

eHealth Stakeholder Group: Report "Perspectives and Recommendations on Interoperability", March 2014

http://ec.europa.eu/newsroom/dae/document.cfm?doc_id=5168&usg=AFQjCNEkGJHkR4TyycRbj5FmDif3T7YPA&sig2=WHoQC4xURmGXaJTYt-Mt1A

- **Multi-stakeholder, multi-systems**
 - Paradigm change needed towards cooperation and collaboration
- **Significant investment needs to be channelled**
 - Maximum sustainability needed, multi-vendor approach
 - Avoid stranded costs
- **Commonly accepted Interoperability specification needed**
 - Based on international standards
 - Stable guidance needed
 - Best-practise needed
- **Procurement and testing procedures must be created**
 - Extensive specifications raise efforts and costs (not only in the beginning)

What HIE parts do you have to establish

- **What shall be exchanged/shared/operated?**

- **Administrative**

- Patient ID, Patient information, Healthcare Provider Information

- **Security and Privacy**

- Access Control, Audit and Logging, ...

- **Clinical**

- Documents, Images, Medication information, Immunizations, ...

- **Other**

- Advanced directives, Birth, Death, Cancer-Registers, ...

**Interoperability
use-cases**

IHE Profiles Adoption Worldwide in Regional and National HIE

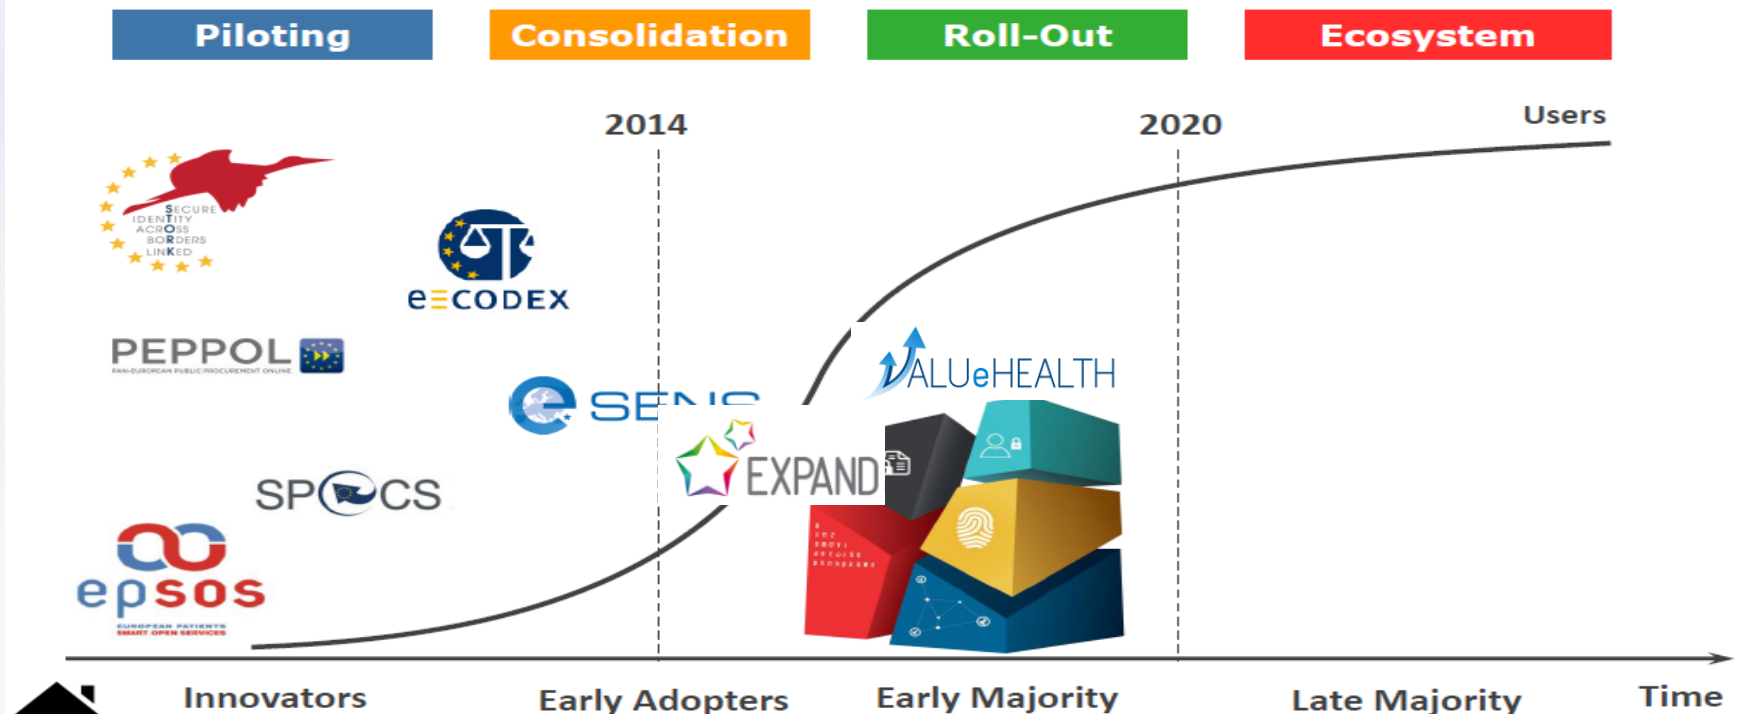

- Stable Profile specification: IHE Technical Framework
- First implementation of XDS in clinical use in region of Veneto - Italy since early 2008
- Several regions since:
 - Lower Austria, Japan, Dutch, Italian, Denmark, England
 - US States (Vermont, New York, Texas, Pennsylvania, etc.), eHealth Exchange Network
- In deployment by several national programs world-wide:
 - US Meaningful Use Stage 3, US Interop Standards Advisory
 - Austria, Switzerland, Finland, Luxembourg, Denmark (PHR), etc.
- Embedded in other Frameworks
 - OpenHIE (Low and emerging countries)

First eHealth large scale deployment: European Patient Smart Open Services
2008 – 2014
36,5 Mio € spent
25 European countries

Creating a #DigitalSingleMarket

The building blocks represent a massive investment since their creation by the Large Scale Pilots. As their user base grows, the Commission is already working on their sustainability beyond CEF.

Source: Gerald Cultot, European Commission, Keynote speech at IHE World Summit 2016

- **Commission Decision 2015/1302**, published on 31 July 2015, identifies **27 IHE Integration profiles for referencing in public procurement**
http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=OJ:JOL_2015_199_R_0011
- These IHE profiles have the potential to increase interoperability of eHealth services and applications to the benefit of patients and medical community
- The 27 IHE profiles should therefore be identified as ICT technical specifications eligible for referencing in public procurement

Profiles assessed for conformity

LAW - Laboratory Analytical Workflow
PAM - Patient Administration Management
PDQ - Patient Demographics Query
PDQV3 - Patient Demographics Query HL7 V3
PIV - Point-of-Care Infusion Verification
PIX - Patient Identity Cross-Reference
PIXV3 - Patient Identity Cross-Reference HL7 V3
XCA - Cross Community Access

The IHE profiles identified by the European Commission are already included in the IHE Conformity Assessment

IHE as framework for HIE

IHE's philosophy **stimulates cooperation** on organizational, strategical and political levels

Users and Vendors work together!

Engagement in IHE results in benefit for yourself

IHE **supports the paradigm change** needed nowadays

Stakeholders have to work together to solve the challenge

IHE is a **stable guidance**

By profiles, best-practices, others doing the same, etc.

IHE is a **solid basis** for the Interoperability specification

Open, free, vendor-neutral

Typical use-cases already profiled: Patient identification and demographics, Sharing clinical documents, eP/eD, ...

IHE **cuts costs on every edge**

Specification, Procurement, Testing

Bet on IHE as early as possible to leverage maximum benefits
