

The mHealth Plug-a-Thon from IHE-Europe

Integrating
the Healthcare
Enterprise

The **mHealth Plug-a-Thon** from IHE-Europe is a test event dedicated to mobile applications and Application Programming Interfaces (APIs). It incorporates a unique

learning opportunity leveraging IHE experiences from the well-established IHE-Europe Connectathon. It provides a platform for the mHealth Apps Community to innovate, often on the fly, connecting their Apps with the APIs of health IT product solutions in a standardised way.

Learn more about the next mHealth Plug-a-thon

“It was a blend of well-attended educational sessions that translated into really enthusiastic test sessions with the mHealth Community. They were excited to learn from IHE activities and see the potential for new use cases using IHE mHealth Profiles. I am sure future Plug-a-Thons will build on the synergy we found being alongside the IHE-Europe Connectathon”

Mauro Zanardini,

2017 mHealth Plug-a-Thon Coordinator

Benefits of Participation

Invaluable learning experiences from the 2-day educational event.

Intense hands-on test opportunities with APIs from vendors of health IT solutions.

Apps Developers will generate business opportunities by merely being present.

Fostering new relationships with users and vendors – infrastructure/ API Developers.

Networking opportunities with over 1000 European attendees to the IHE-Europe Connectathon, including parallel interoperability events.

Providing new opportunities for API Developers to expand and support further use cases.
