First Working Group that has not an IHE profile as starting point

## New main principles:

- Taking care processes in a certain domain as starting point
- So not from 'system to system' but from 'healthcare professional to healthcare professional' = covers the whole careprocess
- Working from 'building blocks' as much as possible
- Structured approach (ISO TR28380)
- Vendor neutral
- Focus on pragmatic interoperability/information problems
- Outcome not limited to IHE

- Interest of MoH
  - Presentation Guideline at MoH together with Nabon/Soncos (USERS)
  - Both IHE Guidelines mentioned in MoH Newsletter incl download
- Interest of USERS
  - Because scope is on practical information issues
  - IHE Guidelines brings in knowledge they do not have for interaction with the vendors

**IHE Guidelines**  
**Digital Exchange Laboratory data**  
**based on national and international standards**

Healthcare process
